# Set Type

```
numbers = set([1,2,5])
print 3 in numbers
numbers.add(4)
print numbers
numbers.add(1)
print numbers
print numbers | set(['Rita'])
print numbers - set([2,3])
```

Output:

```
False
set([1, 2, 4, 5])
set([1, 2, 4, 5])
set([1, 2, 4, 5, 'Rita'])
set([1, 4, 5])

## Object Identity

- A is B
- A is not B

# Exercise

```
A = []
B = []
A.append(1)
B.append(1)

print (A == B)
print (A is B)

## Sequences

- Lists
- Tuples
- Sets
- Dictionaries
- ...

# Goals for next 30 minutes

- A quiz
- Do a few exercises.
- Play around.
- You can work alone, in pairs, in triples,...
- Looking up answers on the internet is technique, not cheating!

# Lists I

How do you access the first element of a list?
Assume list is a list:

1. list[1]
2. list[0]
3. list[-1]
4. list(0)
5. list(-1)
6. list(1)

# Lists II

How do you access the last element of a list?
Assume list is a list:

1. list[1]
2. list(-0)
3. list[-1]
4. list(-1)
5. list(1)
6. list[-0]

# Object Identity

What is the difference between the following two code examples:
A)

```
A = [1, 2, 3]

B)

```
A = [1, 2, 3]
B = A

Write a small piece of code (should be 2 or 3 lines) that behaves differently if you insert it after each of the two segments above.
